DETAILED ACTION

Claim Rejections - 35 USC § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claims 1, 4-10 and 12-23 are rejected under 35 U.S.C. 103(a) as being unpatentable over Shaffer (USP 5761294) in view of Anderson (USP 6064673).

As claims 1, 4-10 and 12-23, Shaffer discloses an apparatus which includes a remote system (Fig 1, Ref 22) including a splitter which includes a splitter for splitting the incoming telephone signal for inputting into the converters (Fig 1, Ref 32 and 34 has a converter coupling to a modem for converting telephone transmission signal into audio signal for transmission to a central office from a computer having a modem and implicitly providing matching impedance) for receiving telephone transmission signal and providing an analog audio output signal (the analog audio signal will be digitized, packetized and transmitted via a modem (Col. 3, lines 28-34). However, Shaffer does not disclose an interface machine for receiving an audio signal and providing a network audio signal for transmitting via WAN by using a first sound mechanism and local system having second sound mechanism for processing received a network audio signal into a continuous audio signal. In the same field of endeavor, Anderson discloses (Fig 1-3 and col. 1, lines 55 to col. 7, lines 38) an interface machine (Fig 1 is a computer has an analog line interface codec "Ref 16" for converting a transmission signal into the audio signals then generating packets having the digitized audio signal by using a sound mechanism for

Application/Control Number: 08/885,698

Art Unit: 2665

transmitting via WAN 104 to another computer, which have an address, has a sound mechanism for processing the network audio packet; See col. 5, lines 9-45 and Fig 2) for processing a received telephone signal into a network audio signal for transmitting via WAN (Fig 1, Ref 32b) to a local system (Col 5, lines 5-8, a computer "implicitly has an WAN address" which has an WAN address is a multimedia computer with a sound processing software for converting a network audio signal into a continuous audio signal for outputting to a speaker) having second sound mechanism for processing received network audio signal into a continuous audio signal and an automated attendant system (Fig 1, performing automated attendant management, see col. 4, lines 36-48) for gathering the information (See col. 5, lines 46-55).

Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention was made to integrate a gateway for processing a telephone signal into a network audio signal for transmitting via WAN as disclosed by Anderson's telecommunication system into Shaffer's telecommunication system. The suggestion/motivation would have been to reduce the cost of long distance between the users. Even without, Anderson's teaching one of ordinary skill in the art would have known how to converting a telephone signal into a network audio signal because this method is well known in the art and public uses such as vocaltec software for using with a sound card.

Response to Arguments

3. Applicant's arguments with respect to claims 1, 4-10 and 12-23 have been considered but are most in view of the new ground(s) of rejection.

Page 3

Page 4

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Oran (USP 6240084) discloses a gateway for processing analog audio signal into voice packets for transmitting via LAN or WAN.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Steven HD Nguyen whose telephone number is (703) 308-8848. The examiner can normally be reached on 8-5.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Huy D Vu can be reached on (703) 308-6602. The fax phone numbers for the organization where this application or proceeding is assigned are (703) 872-9314 for regular communications and (703) 872-9314 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 305-4700.
